Email: lorenswenson@gmail.com

Education

Ph.D., Physics

University of California, Santa Barbara (March 2007)

B.A., Physics

University of Minnesota, Twin Cities (June 2001)

B.S., Chemistry - Summa Cum Laude

University of Minnesota, Twin Cities (June 2001)

Skill Summary

- Broad experience in nanoscale processing including: thin-film deposition (sputter, e-beam, thermal), etching (wet, RIE, and plasma), and lithography (e-beam and optical).
- Familiarity with standard semiconductor metrology tools: SEM, ellipsometry, AFM, and probe stations.
- Comprehensive understanding of cryogenic methods. Expert knowledge of dilution (~30 mK) and He3 (~300 mK) refrigeration systems.
- Experience with low-frequency and RF electronic measurements of physical systems.
- Proficient with digital logic. In particular, experience with Field-Programmable Gate Array (FPGA) technology and VHDL programming.
- Strong background in scientific computing including adeptness with MATLAB, LabVIEW, Mathematica, AutoCAD, SONNET, Fortran, C, Linux and Windows.
- Ability to fabricate and measure a variety of nanoscale devices including high-quality superconducting resonators and single-electron transistors with nanometer-scale tunnel junctions.

Professional Experience

Institut Néel - Centre national de la recherche scientifique - Grenoble, France

Postdoc - July 2008 to present

Responsible for the design, fabrication and measurement of detector arrays based on frequency-multiplexed superconducting resonators. Target applications include terrestrial astronomy, quantum computing and fundamental physical measurements.

Cañada Community College - Redwood City, CA

Adjunct Faculty - January 2008 to June 2008

Instructor for introductory physics and astronomy courses.

University of California, Santa Barbara

Graduate Research Scientist - June 2002 to March 2007

Thesis Adviser: Professor Andrew Cleland.

Conducted fundamental research on novel high-speed electronics at cryogenic temperatures. Pioneered new methods for extremely sensitive calorimetry and photon-limited bolometry. Thesis: *High-speed measurement of single-electron circuits at low temperatures with bolometric and calorimetric applications.*

Teaching Assistant - August 2001 to June 2002

Led discussion and laboratory sections in undergraduate physics.

University of Minnesota, Twin Cities

Undergraduate Research Scientist - August 1999 to June 2001

Synthesized and characterized novel inorganic compounds for use in molecular sensing applications. Thesis: *Electronic transitions in vapochromic quasi one-dimensional [Pt(arylisocyanide)₄][Pt(CN)₄] crystals.*

Presentations

Contribution: “Progress in fast, sensitive, high-resolution imaging utilizing frequency-multiplexed, superconducting resonators,” CASPER Workshop III, Cape Town, South Africa (2009). Video link: <http://casper.berkeley.edu/wiki/Videos>

Contribution: “A fast, ultra-sensitive and scalable detection platform based on superconducting resonators for fundamental condensed-matter and astronomical measurements,” Low-Temperature Devices 13 (LTD-13), Stanford, CA (2009).

Contribution: “In situ measurement of the permittivity of helium using microwave NbN resonators,” APS March Meeting, Pittsburgh, PA (2009).

Contribution: “A three-junction single electron transistor as a diffusive, high-speed thermometer: Experiment and simulation,” APS March Meeting, Denver, CO (2007).

Contribution: “Nanoscale metal thermometry using a radiofrequency single electron transistor,” APS March Meeting, Baltimore, MD (2006).

Contribution: “Mixing with the radiofrequency single-electron transistor,” APS March Meeting, Los Angeles, CA (2005).

Honors and Awards

National Science Foundation/Lando Fellowship, 2000.

University of Minnesota, Department of Chemistry, Undergraduate Scholarship, 1999, 2000, and 2001.

Marshall H. and Nellie Alworth Memorial Fund, 1997-2002.
